

Summer is here - Stay active with SEVATEX PMM!

Temperatures are rising, but with SEVATEX PMM from Textilcolor we don't have to abstain from sporting activities. You can enjoy maximum wearing comfort even in warm weather - thanks to optimum moisture management for PES articles.

Your benefits with SEVATEX PMM:

- Effective moisture regulation – fast sweat evaporates, the textile remains pleasantly dry
- Maximum comfort - reduced static charge and gives a soft, pleasant feel
- Improved functionality - greater sewability and improved soil-release effect
- Wash-resistant up to 40 °C - long-lasting quality and freshness
- Suitable for exhaust and continuous processes

Stay active and feel good - with SEVATEX PMM!

Dear readers,
dear friends of Textilcolor

What kind of times are we actually living in? What is considered a rational decision today may turn out to be a mistake tomorrow. Dependence on politics is the order of the day.

Both we and our customers have been affected not only by American politics, but also by international conflicts. At the same time, we in Europe must not forget that - despite all the challenges - we still live in a privileged position. This awareness is essential.

Our goal as a company is to become „fit for the future“. This means preparing ourselves for upcoming adversities and facing them with determination.

This week we discussed our climate targets for the next 25 years. Can we plan that far ahead? The net-zero target for greenhouse gases is ambitious and necessary to limit global warming. At the same time, we need to keep an eye on the economic aspects.

What opportunities are there for us? How can we not only deliver quickly and reliably, but also develop innovative products that help our customers to reduce costs, simplify processes and offer their end customers creative solutions?

One example is SOFTYCON FRESH, which softens and eliminates unpleasant odours at the same time. Provides a double advantage: longer service life of the textile without washing and new softening properties.

Other topics for us include new bisphenol-free fastness improvers for polyamide, new hydrophobic finishes and a new portfolio for coatings.

Let's tackle it together. We are also happy to develop customised solutions - specifically tailored to your needs. It is precisely this synthesis expertise that characterises us. Customised for our customers and for your needs.

We look forward to your feedback.

Kind regards,
Your Textilcolor AG / Detlef Fischer

SOFTYCON FRESH

The universal softener for textile finishing with enhanced functionality to improve textile care

SOFTYCON FRESH is an aqueous microemulsion based on polysiloxane compounds. In addition to its excellent softening properties, this softener offers extended functions.

- Provides a soft, silky hand feel
- Hydrophilic character
- Improves sewability
- Enhances moisture transport
- Maintains a pleasant, neutral odour
- Stable to shearing forces
- Stable in alkaline liquors up to pH 10
- Resistant to yellowing
- Easy to apply in padding and exhaust processes
- Wash- and dry-cleaning resistant
