# Permanent flame protection for synthetic fabrics

With the pyroshell™ technology, Textilcolor is setting completely new standards in flame protection. Reliable protection from heat and flames is now possible on synthetic fabrics and provides outstanding safety.

## New standards in safety and comfort

pyroshell™ revolutionises flame protection and minimises potential burns. When a fabric with pyroshell™ technology is exposed to a flame, a massive volume increase is triggered. As a result, both the heat and the oxidising gasses are kept away from the fabric. In addition, the time between the onset of pain caused by the skin heating up and the occurrence of second-degree burns is doubled. Compared to conventional flame protection articles, the wearer has more time to react to the fire. Textilcolor has succeeded in combining permanent flame protection with polyamide and polyester fabrics. Therefore, safety personnel, railway workers, police officers or electricians, for example, are not only ideally protected in the case of possible contact with fire and sparks, but can also enjoy the familiar comfort of synthetic functional fabrics.

WATER REPELLENT

WINDPROOF

FLAME RETARDANT

BREATHABLE

- Minimizes potential burns with lightweight protective clothing
- Hardwearing and sustainable
- Flame protection is free of phosphorus and halogens
- Modular use (can be combined with other Textilcolor technologies)
- Polyester-based, available in all high-visibility colors
- Polyamide-based with maximum abrasion resistance
- Can be printed with camouflage

## Sustainability

pyroshell™ is produced in accordance with the bluesign® system. The bluesign® system is the solution for a sustainable textile production. It eliminates harmful substances right from the beginning of the manufacturing process and sets and controls standards for an environmentally friendly and safe production.

## Performance tests

### Made-to-measure flame protection

pyroshell™ is not only a technology but also a comprehensive, modular overall concept. Depending on the area of use and requirement profile, the pyroshell™ flame protection fabric complies with a broad range of norms such as EN ISO 11612 (clothing to protect against heat and flames), EN ISO 11611 (protective clothing for use in welding and allied processes), DIN EN 1149 (electrostatic protection), EN 343 (protection against rain) or EN 61482-1-2 (workwear for protection against electric arcs).

Articles coloured according to EN 20471 high-visibility colours are also combinable with pyroshell™ (Bright-Yellow, -Orange, and -Red). Of course, all other customer-specific colors can also be combined with pyroshell™.

### pyroshell™-test: limited flame spread in accordance with EN ISO 15025:A

This test measures the limited flame spread on vertically oriented textile fabrics when exposed to a defined flame for 10 seconds. The pyroshell™ flame protection fabric passes the 10-second test and the flame does not continue to spread even after an additional 5 minutes of exposure.
